

Bar Graph Client/Server Application

This application is aimed to visualize special format text data on the Internet browser's screen, as a bar chart. It has a minimalistic user interface for file upload. As soon as the user uploads the file the application generates the graph, and exposes it on the screen.

The application consists of one MVC Controller and one API Controller, which manage the server/client communication, data retrieval service, and html page with script, that calls the api and dynamically generates the graph.

Prerequisites

- Microsoft Visual Studio
- ASP.Net 4.5
- mdbootstrap

Built With

- MDBootstrap - The web framework used
- ASP.Net 4.5
- Web API
- MVC
